Languages

English

Proficient user

Greek / Albanian

Mother tongue

Technical Skills

Languages

JavaScript (ES6+), TypeScript, Python

AI / ML

RAG pipelines, LangChain, Vector Search (OpenSearch), Prompt Engineering, Model orchestration, AWS Bedrock, Azure AI Foundry, MCP, ElevenLabs

Backend

Node.js, Express.js, NestJS, Microservices Architecture, Event-driven systems, Prisma/PostgreSQL, MongoDB, Redis, REST APIs, GraphQL, Stripe

Cloud / DevOps

AWS, Azure, Docker, GitHub Actions, CI/CD, Grafana, CloudWatch

Frontend

Vue 3, React.js, Next.js, HTML5, CSS3

Other

Agile/Scrum, Developer Experience, Testing (Vitest, Cypress), Automation, System Monitoring

Professional Skills

Ownership & end-to-end delivery · Communication & technical decision-making · Cross-functional collaboration (ML, data, product, design) · Operational excellence: reliability, observability, incident handling

Driving Licence

A2, B

Senior AI & Backend-focused Software Engineer with **7+ years** building **production-scale systems and LLM-powered products**. First senior engineering hire at a healthcare AI startup, where I led an **event-driven re-architecture scaling the platform from ~500 to thousands of concurrent users**. Previously shipped **RAG and multi-agent systems** to production, re-architected multi-region search, and built observability that cut incident detection time. Comfortable across **AWS and Azure**; strong on ownership, technical direction and team engineering practices.

Selected Technical Highlights

- **First senior hire** at an AI startup: set technical direction, CI/CD, code review and testing practices from day one
- Led the migration to an **event-driven architecture**: 500–700 to **thousands of concurrent users**
- Productionised **LLM-powered RAG and multi-agent systems** with guardrails (LangChain, vector search, AWS Bedrock, Azure AI Foundry)
- Operated **multi-region, multi-cloud deployments** (AWS, Azure) with observability and CI/CD
- Optimised search relevance and performance with **OpenSearch**; worked in a **~150-service microservices ecosystem**

Experience

Senior Software Engineer

Ontzorgd

Rotterdam, Netherlands

04/2026 – Present

- **First senior engineering hire** at an early-stage AI startup building clinical documentation tools for mental-healthcare providers; shaped technical direction and practices from day one.
- Led the migration to an **event-driven architecture**, scaling from **500–700 to thousands of concurrent users**; built core services.
- Integrated **Stripe** subscription billing; raised **CI/CD, code review and testing** standards across the team.

Full-Stack Developer

Studyportals

Eindhoven, Netherlands

03/2024 – 03/2026

- Co-designed and rolled out an AI chatbot platform (RAG) serving **~500 daily users**, lifting sponsored partner engagement by **3%** through better content discovery.
- Built and maintained **microservices and frontend modules** in TypeScript, Node.js, Vue 3, Docker and AWS.
- Re-architected the OpenSearch deployment (indexing and query tuning, **multi-region** setup), reducing latency and improving availability.
- Contributed to key AI-platform decisions: the **transition to a multi-agent architecture and guardrails** for response quality, safety and reliability.
- Built Grafana dashboards and CloudWatch metrics and alerts, enabling **faster incident detection**.
- Automated deployments with GitHub Actions and Docker; added **automated testing (Vitest, Cypress)** and monitoring.

Full-Stack Engineer

NIKI Ltd Digital Engineering

Ioannina, Greece

09/2021 – 02/2024

- Delivered full-stack features (Node.js, React, GraphQL, Docker, AWS) in a **~150-service microservices ecosystem**.
- Improved API performance by **~30%** by extending Redis caching and async pipelines in a system handling **~100 req/s with large payloads**.
- Built Python analytics dashboards used by **engineers and business stakeholders** for system monitoring and automated reporting.
- Mentored junior developers; upheld code quality through reviews and testing.

Android Engineer (R&D)

PD Neurotechnology

Ioannina, Greece
09/2020 – 07/2021

- Built Android apps used by **physicians for medical research**, integrating BLE wearables for real-time data collection under strict reliability constraints.
- Designed secure data pipelines (JWT, REST) and a **custom BLE packet transport** to handle bandwidth limits and signal degradation at distance.
- Streamlined releases and automated build workflows, improving delivery speed and app stability.

University Teaching Assistant

Department of Computer Science & Engineering (Uoi)

Ioannina, Greece
09/2019 – 01/2020 · 09/2020 – 01/2021

- Taught **Software Development** labs: supported student projects, ran code reviews and coached engineering best practices.

Freelance / Internship Roles

Terracom Informatics

Ioannina, Greece
2016 – 2018

- Built mobile and web apps (Java, PHP, Android), including a **GPS-tracking Android app** with reporting, delivered end-to-end from implementation to deployment.

Education

Master's degree: Data and Computer Systems Engineering

University of Ioannina

10/2019 – 07/2021

Integrated Master thesis: Design of a 3DoF Haptic Device (Robotics)

University of Ioannina

03/2017 – 10/2017

Bachelor of Engineering: Computer Science & Engineering

University of Ioannina

10/2012 – 10/2017

Publications

Joint Source and Schema Evolution: Insights from a Study of 195 FOSS Projects

OpenProceedings

March 2023
